

Dear Customer,  
following you can see the possible cement plant capacity sizes of IRD Swiss construction portfolio:

Cement Plant project turnkey EPC contracted including Civil Work	Price € (EUR)
Cement Plant 4000 TPD (4000 to per day) single line plant	130 Mio + 55 Mio CW
Cement Plant 5000 TPD (5000 to per day) single line plant	139 Mio + 58 Mio CW
Cement Plant 6000 TPD (6000 to per day) single line plant	149 Mio + 59 Mio CW
Cement Plant 8,000 TPD (2* 4000 to per day) double line plant	240 Mio + 85 Mio CW
Cement Plant 10,000 TPD (2* 5000 to per day) double line plant	260 Mio + 94 Mio CW
Cement Plant 12,000 TPD (2* 6000 to per day) double line plant	280 Mio + 99 Mio CW

IRD Swiss charges mostly for CW local building and construction companies onsite place of project erection, so maybe we have to adapt the pricing for CW according special conditions we could be forced to. The exact price of CW we just can offer after feasibility study is done!

Please note that the given prices include kiln and pre-heater firing by Gas (NG, LNG), Oil (HFO, LFO) fuel. For kiln firing needed by coal dust we have to add a separate coal dust plant including a Vertical Coal Mill department. Therefore, we quote for an additional Coal department.

Please consider, for example of 6000 TPD Cement Plant, about 10.5 Mio Euro more price, if coal will be used.

We also quote Power Plants inside our Cement Plant layouts. It must be considered, that installing such power plant needs to calculate approximately 1.10 Mio EUR for 1 MW power supply performance.
